Illumi-Guard

Instant verification and deterrence lighting for Telescopic Mobile Surveillance Towers

The LTS Illumi-Guard is an innovative low power LED lighting solution designed to fit on *most* telescopic mobile surveillance towers.

This lighting provides instant verification of tower operation with green LEDs constantly running in a visor pattern. Not only does this provide deterrence on site, but also a quick way for engineers or site security to see all security towers are operational.

Running in a visor pattern ensures there are only a small number of LEDs active at any one time, keeping the power requirements extremely low. Perfect for solar offgrid towers.

A red and blue alarm pattern is also available either triggered manually through the LTS remote portal or automatically from camera AI.

Key features and specifications

- 90x Individual LEDs

- 4x Separate modules for each tower side

- Easy fit internal wiring and connectors

- Green visor LED pattern for continuous running

- Red/Blue alarm mode

- Manual or camera based alarm trigger

- Ultra low power usage at 120mA

- IP65 Weatherproof

- 12vDC Powered

- CE/UKCA
